

(Old) Daily Operation Checklist for Older Units with a MPH/Distance Key

Use this Daily Operation Checklist to calibrate older speed indicator units.

For Older Units with a MPH/DIST Key	
Daily Operation Checklist	
STEP	ACTION
1	Turn the unit on by pressing the <i>C (Circumference)</i> key.
2	Compare the number shown on the digital display to the number recorded for Circumference on the front cover of the Herbicide Record Book.
3	If numbers are not identical, press and hold the <i>C (Circumference)</i> key and at the same time press the "+ or -" key and adjust the readout to the number determined in step 10 above and as shown on the front cover of the Herbicide Record Book.
4	If numbers are identical, press the <i>Mph/Dist</i> key to change the readout mode to speed (readout will display <i>S 0.0</i>).
5	Proceed with normal spraying operations <i>Using Digital Speed Indicator To Monitor Vehicle Speed</i> .
6	If unit reads speed inaccurately or erratically, <i>Report The Malfunction To Your District Vegetation Manager</i> .

Note: The speed indicator is to be used for measuring the speed of the vehicle only, and should not be used to measure the number of acres sprayed.
